

WHAT IS MESHTASTIC?

Meshtastic turns a small handheld radio into a private group messaging device — no cell service, no WiFi, no internet required. The radio pairs to a free app on your phone over Bluetooth. Everyone on the same network can send and receive text messages, and the network stays up even when all other communications fail.

At an M2 Node deployment, Meshtastic extends your radio reach beyond the node's WiFi footprint. Learn more at meshtastic.org.

WHY MESHTASTIC FOR COMMUNITY PREPAREDNESS?

Meshtastic is free, open-source, and completely off-grid. Radios communicate directly with each other — no phone company, no server, no single point of failure. A small group of 3–5 radios can cover a neighborhood, an event site, or a deployment area with no infrastructure at all.

HOW CAN I GET STARTED?

At any M2 Node activation, Meshtastic radios will be on the network. Install the free app, ask the network operator to add you to the active channel, and you're live. If you'd like your own radio for future deployments, see the options to the right.

Field note: Use a dedicated or secondary device when possible — an old phone with no SIM card works perfectly. Keep your primary device available for other mission needs.

SECURITY & OPERATIONAL TIPS

- No cell network or internet required — radios talk directly to each other, up to several kilometers range depending on terrain.
- Turn on Airplane Mode, then re-enable Bluetooth only. Your phone connects to the radio and nothing else.
- An old phone or tablet with no SIM card works perfectly. No carrier plan needed.

APP DOWNLOAD

Download the free Meshtastic app for your phone. Scan the QR code or search **Meshtastic** in your app store.

HARDWARE OPTIONS

Most devices are ready to use out of the box. Prices listed are approximate.

\$40

SenseCAP T1000-E

- Credit card size — easy to carry or clip to gear
- Includes GPS location tracking

HELTEC T114 — TWO OPTIONS

\$43

Heltec T114 (Rokland)

- Board only — you supply a battery and case
- Many free 3D-printable case designs available

\$50

Heltec T114 Kit (Amazon)

- Best battery life — good for extended field use
- Battery, case, and GPS included — snap together, no soldering

\$53

LILYGO T-Echo

- Ready to use out of the box — GPS included, no assembly
- Ships from US or China warehouses

LILYGO T-DECK — NO PHONE NEEDED

A fully self-contained device with built-in keyboard and screen — no phone required. Often out of stock in the US; check before ordering.

\$82

LILYGO T-Deck Plus
